At Union Station, on the triangular parcel bound by Spruce Street, Asylum Street and I-84, currently in use for surface parking, a new mixed-use building is suggested. The building combines an expanded parking supply for the transit station, an air-rights building, and neighborhood service retail along the Asylum Street frontage.

Street and highway access plus station makes this a multi-modal transportation center with plans for more modes (e.g. commuter rail)

Potential for on-site joint development with station—some costs paid by FTA?

Site already state owned—no loss of tax resources; could demonstrate state’s commitment to land use/transportation integration
New Britain – Hartford Busway Station Area Planning Project
Union Station Area Concept: Transit Pushes Redevelopment North

Accomplishments:
• Fills gap created by I-84
• Connects Downtown to northern neighborhoods
• Takes advantage of underutilized sites
• Leverages Public Safety Center
• Adds more housing Downtown

The Ann Street Initiative is a long range vision with a singular purpose: to focus development in the downtown core within walking distance of working, shopping and entertainment destinations and within easy walking distance of the Union Station Transit Station and the Downtown Circulator. The bold vision is to use the proximity to transit, employment and entertainment retail to revitalize the north side of I-84. It is rare to find 31 acres so near downtown to regional and intercity transportation. This is a significant opportunity.

The plan includes decking over I-84 between High and Trumbull Streets and reconnecting to Clay Arsenal neighborhood with new structures and parks that create a green line from Bushnell Park to Tunnel Park. I-84 through Hartford is due for a review; the decking option should be considered and evaluated early in that review.

"The Bones": Key Development Principles
Encourage development corridor along Ann Street with new buildings tied together by a series of small parks
Take advantage of large underutilized sites close to downtown for both office and residential development
Fill gap created by I-84 thereby connecting Clay Arsenal to Downtown Hartford
Create a mixed-use facility at Union Station that accommodates busway needs and provides private development opportunities
Require new housing to be at densities of 12 or more dwelling units per acre and commercial development to be at densities of 25 of more employees per acre to create a more active 18 hour downtown

Economic Benefits
The proposed joint development project at Union Station would have an estimated construction value of $17.1 million, generating an estimated 129 direct and indirect person years of employment, and $6.1 million direct and indirect payroll dollars. Once fully occupied 300 permanent, sustained jobs would be created generating an annual payroll of $14.8 million. Assuming the building was leased to the private sector and paid full property taxes, annual property tax revenues would be $756,773. All figures are in constant 2004 dollars and do not include any impact from inflation and are based upon current payroll and tax rates.

Development Summary-Two Options Prepared
Prepared by Crosby | Schlessinger | Smallridge, LLC for the City of Hartford and the Capitol Region Council of Governments
New Britain – Hartford Busway Station Area Planning Project

Sigourney Station Concept: Linking Corporate Campus to Transit Oriented Development

**TOD Concept: Sigourney Station**

**Challenge:**
To create a highly visible station in a hidden location
Surrounding neighborhoods built to pedestrian scale, approaches to station need considerable improvement

**Opportunity:**
Aetna’s plans for a new garage

**Implementation:**
DOT/Aetna must negotiate joint agreement. Though complicated, should urge this occur rather than alternate station site.

Station site today. Concept is for new garage to be angled to make site visible and open

New Britain – Hartford Busway Station Area Planning Project
Sigourney Station Area Concept: Linking Corporate Campus to Transit Oriented Development

The conceptual plan assumes that the transit station will be developed in conjunction with a new Aetna garage, and will include a plaza facing Sigourney Street and sloping down to the busway level. The Plan uses the transit station plaza, and streetscape/pedestrian improvements along Hawthorn and Sigourney Streets, to create a more attractive environment for residential development along Hawthorn Street.

“The Bones”: Key Development Principles

- Design the transit station as an open plaza, using steps and terracing to connect the busway platform level with Sigourney Street above
- Consolidate Aetna parking and redevelop former surface lots for residential use
- Enhance Hawthorn Street with residential development and streetscape improvements. Heavy landscaping should screen the new development from views of I-84 above
- Housing density should be a minimum of 12 units/acre

**Development Summary**

Parkville Station Transit-Oriented Development Concept:
Busway a Boon to Growing Design District

The Parkville TOD Plan bridges off of the very considerable assets of the neighborhood and the opportunities for renewal and economic development along Bartholomew Avenue and Pope Park Highway. The plan has two key components: The Bartholomew Avenue Corridor/Commercial Design District and the Pope Park West Residential District.

**Development Summary**

<table>
<thead>
<tr>
<th>Land Use</th>
<th>Total Space</th>
</tr>
</thead>
<tbody>
<tr>
<td>Retail</td>
<td>87,000 sq. ft.</td>
</tr>
<tr>
<td>Office</td>
<td>40,000 sq. ft.</td>
</tr>
<tr>
<td>Residential</td>
<td>274 units</td>
</tr>
</tbody>
</table>

**“The Bones”: Key Development Principles**
- Consolidate parking in garages to allow for additional retail development along Bartholomew Ave
- Housing density should be a minimum of 12 units/acre
- Build Pope Park West to provide amenity for new housing
- Encourage expansion of home furnishings district and the introduction of other uses such as housing
- Link transit station to Bartholomew Ave. Corridor with pedestrian bridge and new plaza
- Create pedestrian walkways to connect Bartholomew Ave. to Pope Park West

**Economic Benefits**
In constant 2004 dollars the development concept would have an estimated construction value of approximately $45.1 million dollars, thereby generating an estimated $16.2 million dollars in direct and indirect payroll as well as 434 person years of employment. Once the development was fully absorbed, the annual, permanent, sustained economic and fiscal impact would represent 430 direct jobs, $9.5 million dollars in payroll, 600 residents and $1.9 million dollars of property tax. All amounts are in constant 2004 dollars and do not include any impact from inflation; they are based upon current construction costs, payroll levels and property tax rates.

New Britain – Hartford Busway Station Area Planning Project
Flatbush Station Area Concept: Putting Pedestrians First

Long-Term Redevelopment: The linear parcelization of the land north of Flatbush and east of the busway makes for a more problematic program of transit-oriented development. The plan shows the introduction of public and private recreational opportunities that provide some synergy with the nearby theater on New Park Ave., providing multiple entertainment opportunities for kids, teenagers and families, as well as shoppers. Given the strong market for existing uses, redevelopment of parcels now in auto-oriented uses along New Park Ave. is a longer term proposition. A change in use is not likely to occur until property values rise, in part due to the busway, and the retail market changes.

“The Bones”: Key Development Principles
Create pedestrian friendly plazas at the station and on the corner of nearby parcels as they are redeveloped
Provide safe pedestrian access to large Charter Oak Marketplace
Encourage long term redevelopment of New Park Ave. for denser commercial uses
Develop industrial property north of Flatbush into transit-supportive uses
Design the Flatbush Ave. bridge to create a gateway into the area for pedestrians and drivers
Housing density should be a minimum of 12 units/acre
